# of Samples	Depths	Notes	
	Surface Depth:		
	Subsurface Depth:		

Helpful tips to ensure good results:

1. Complete field submission information to ensure good data reporting.
2. Do not mix fields on a single submission form. Check test package for requested test.
3. If choosing samples a la carte, indicate them in the notes space.
4. Field size is capped at 99 grids/zones per lot.
5. Use clean probes and buckets for sampling.
6. Ensure depths are represented equally in your sample.
7. Fill soil bag with approximately two cups of soil.
8. Mix cores well to generate sample.
9. Number sample bags sequentially: 1,2,3, etc.

If samples have subsoil portion, note the bag as 1a, 2a, 3a, etc.

Thank you for your business.
